# Penelitian yang Dilakukan

- Classifier: Decision Tree
- 5 Feature Extractor untuk dibandingkan:
  - GA Select
  - GE Gavrilis
  - GE Global
  - **GE Multi**
  - **GE Tatami**

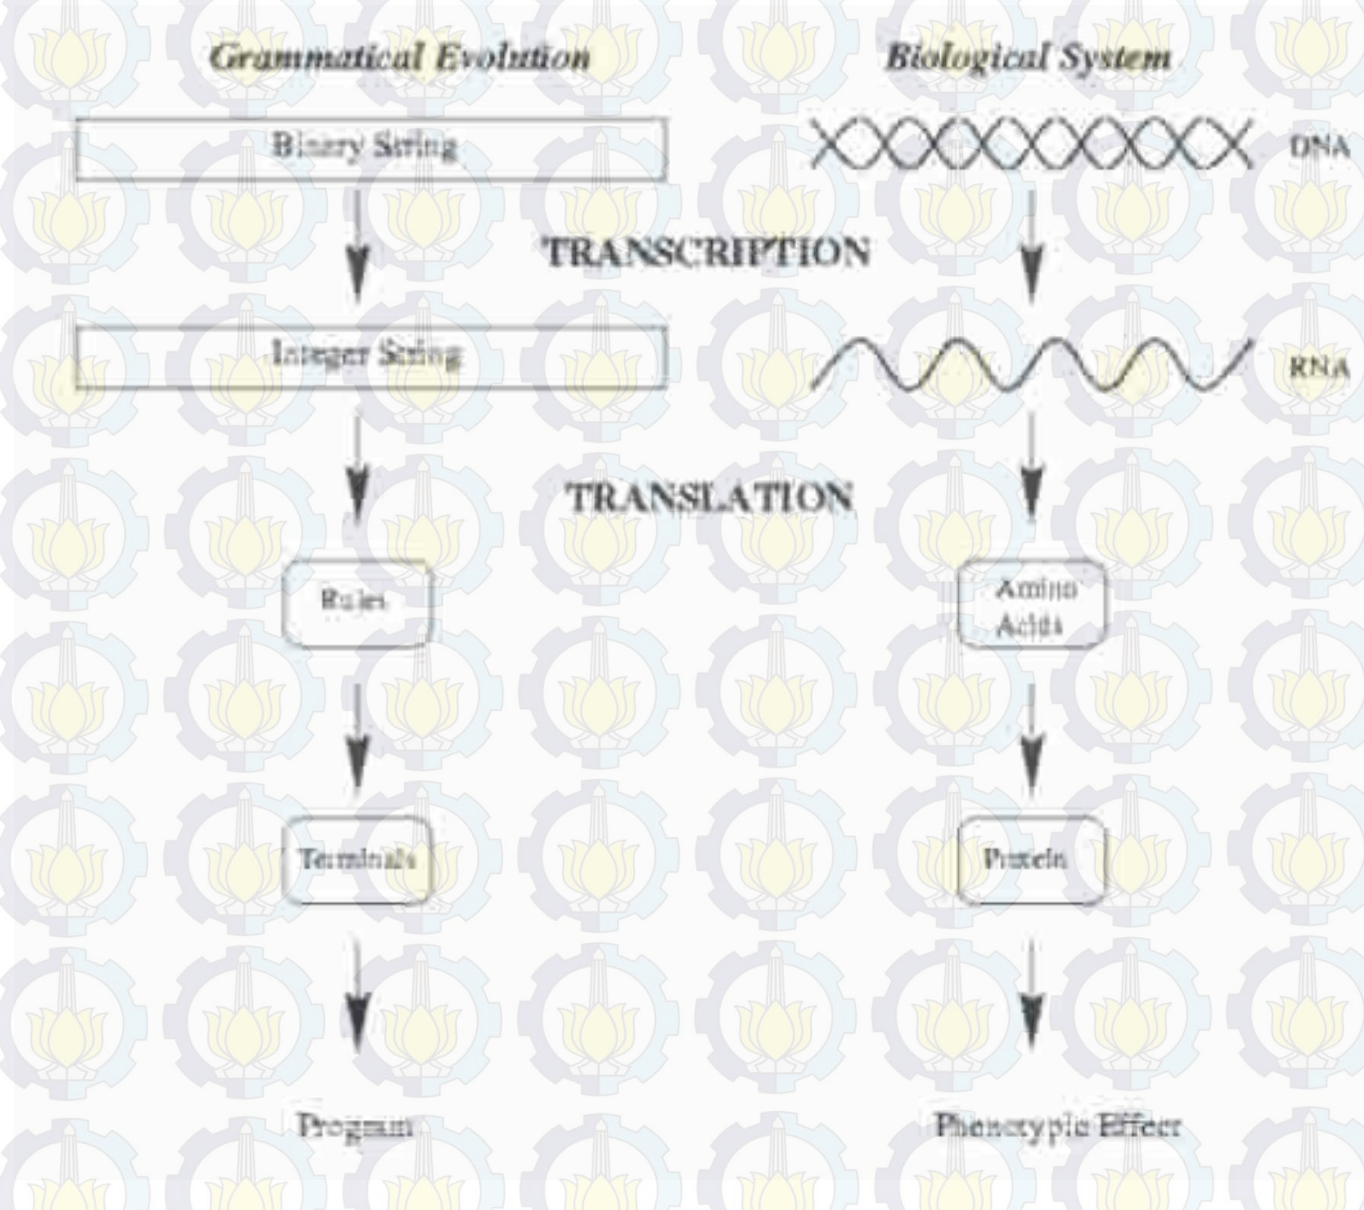

GA : Genetics Algorithm

GE : Grammatical Evolution

# Grammatical Evolution (Overview)

# Grammatical Evolution (Detail)

- Given the individual

220	203	51	123	2	45
-----	-----	----	-----	---	----

 ....what will happen?

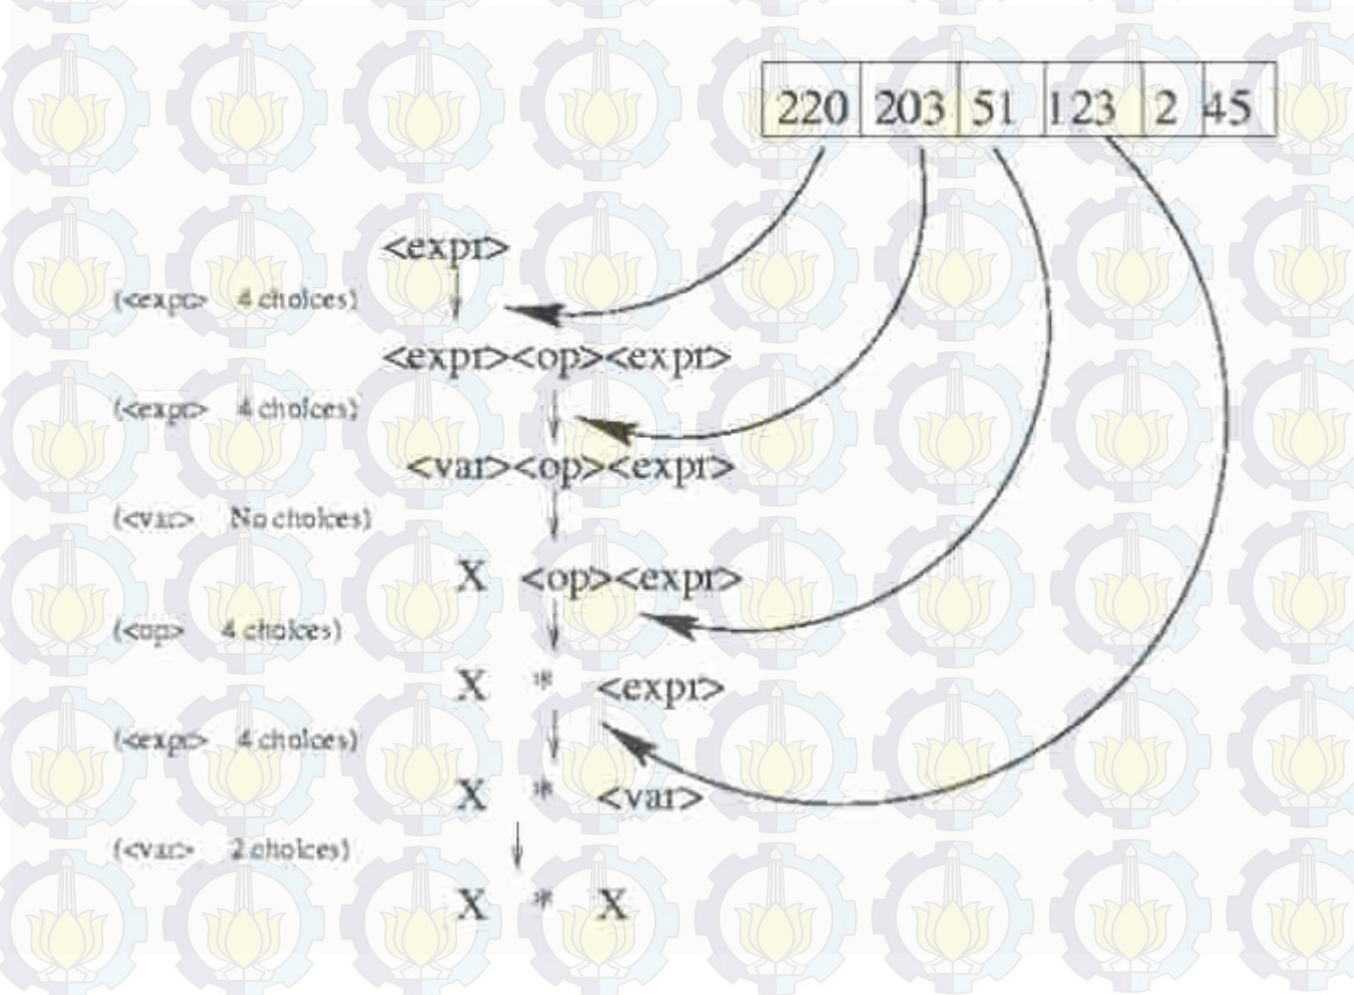

- $\langle \text{expr} \rangle$  has 4 production rules to choose from

(1)  $\langle \text{expr} \rangle ::= \langle \text{expr} \rangle \langle \text{op} \rangle \langle \text{expr} \rangle$  (A)  
|  $( \langle \text{expr} \rangle \langle \text{op} \rangle \langle \text{expr} \rangle )$  (B)  
|  $\langle \text{pre-op} \rangle ( \langle \text{expr} \rangle )$  (C)  
|  $\langle \text{var} \rangle$  (D)

- Taking first codon 220 we get  $220 \text{ MOD } 4 = 0$
- Gives  $\langle \text{expr} \rangle \langle \text{op} \rangle \langle \text{expr} \rangle$
- Next choice for the first  $\langle \text{expr} \rangle$ 
  - Taking next codon 203 we get  $203 \text{ MOD } 4 = 3$
  - Gives  $\langle \text{var} \rangle \langle \text{op} \rangle \langle \text{expr} \rangle$

# Grammatical Evolution (Detail)

# GA Select

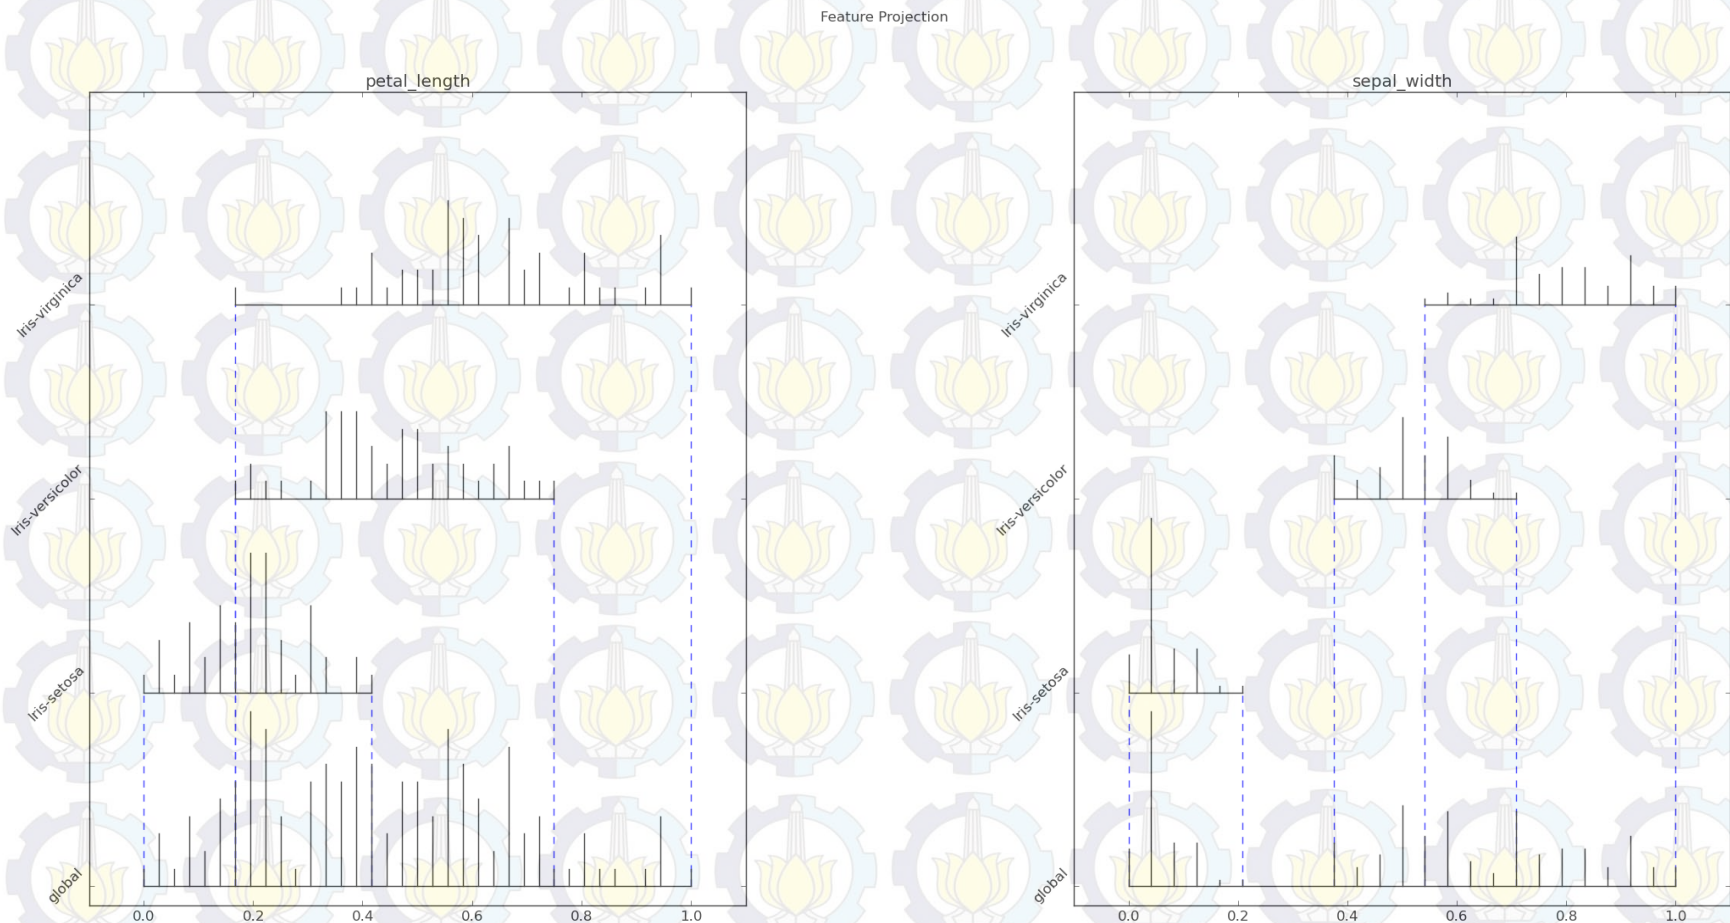

- Algoritma Genetik
- Individu di-evolusikan menjadi **subset fitur original**
- Fitness Value = Akurasi Classifier menggunakan subset fitur original
- Menilai keakuratan subset fitur tanpa modifikasi.
  - Misal: Fitur original =  $\{x,y,z\}$
  - Subset fitur yang dihasilkan:
    - $\{x\}$
    - $\{x,y\}$
    - $\{x,z\}$
    - $\{y\}$
    - $\{y,z\}$
    - $\{z\}$

# Fitur yang Dihasilkan GA Select

- **Fitur original(4)** : sepal\_length, sepal\_width, petal\_length, petal\_width
- **Fitur yang dihasilkan (2)** : petal\_length, sepal\_width

# GE Gavrilis

- Grammatical Evolution
- Individu di-evolusikan menjadi **1 set fitur baru**
- Dihasilkan sejumlah fitur secara acak, namun tidak semuanya relevan
- Fitness Value = Akurasi Classifier menggunakan set fitur baru
- Gavrilis D., et al. (2005)

# Contoh Fitur yang dihasilkan GE Gavrilis

- **Fitur original (4):** sepal\_length, sepal\_width, petal\_length, petal\_width
- **Fitur yang dihasilkan (1):**  $(\text{sepal\_width}) * ((\sqrt{\text{sepal\_width} + (\text{sepal\_length}) * ((\text{sepal\_width}) / (\text{sepal\_width}))) / 2}) * (\text{abs}(((\text{sepal\_length}) - (\text{petal\_length})) + (\text{sepal\_length}))))$

# GE Global

- Grammatical Evolution
- Menghasilkan **1 fitur baru**
- Fitness Value = Akurasi Classifier menggunakan 1 fitur baru

# Contoh Fitur yang dihasilkan GE Global

- **Fitur original** : sepal\_length, sepal\_width, petal\_length, petal\_width
- **Fitur yang dihasilkan (1)**:  $-(\text{abs}(((\text{petal\_length}) + (\text{petal\_width})) - (\text{sepal\_width})))) + ((\text{sepal\_length}) + (\text{sepal\_length}))$

# GE Multi

- Grammatical Evolution
- Menghasilkan **n fitur baru**,  $n$  = jumlah kelas
- Fitness Value = Akurasi Classifier menggunakan **n fitur baru**

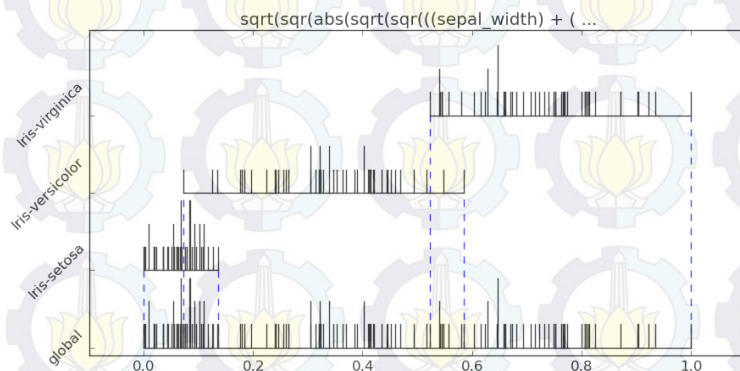

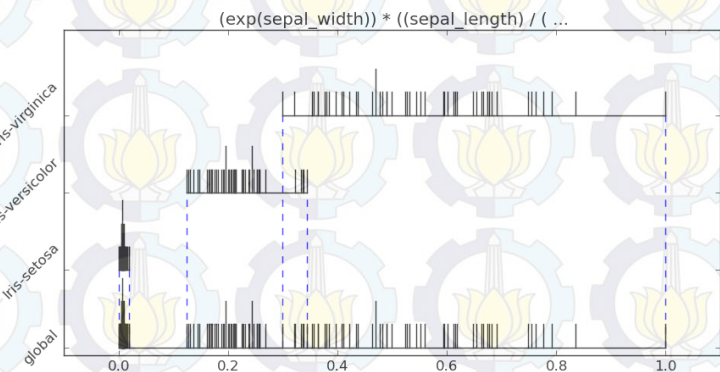

# Contoh Fitur yang dihasilkan GE Multi

- **Fitur original** : sepal\_length, sepal\_width, petal\_length, petal\_width
- **Fitur yang dihasilkan (3)**: sepal\_length,  $(\exp(\text{sepal\_width})) * ((\text{sepal\_length}) / (\text{petal\_width}))$ ,  $\sqrt{\sqrt{\text{abs}(\sqrt{\sqrt{((\text{sepal\_width}) + ((\text{sepal\_width}) - (\sqrt{\sqrt{((\text{petal\_length}) - (\text{sepal\_length}) + \text{sepal\_width})/2))}} - (\text{petal\_width}) + \text{petal\_width})/2)) + \text{sepal\_length})/2}}$

Feature Projection

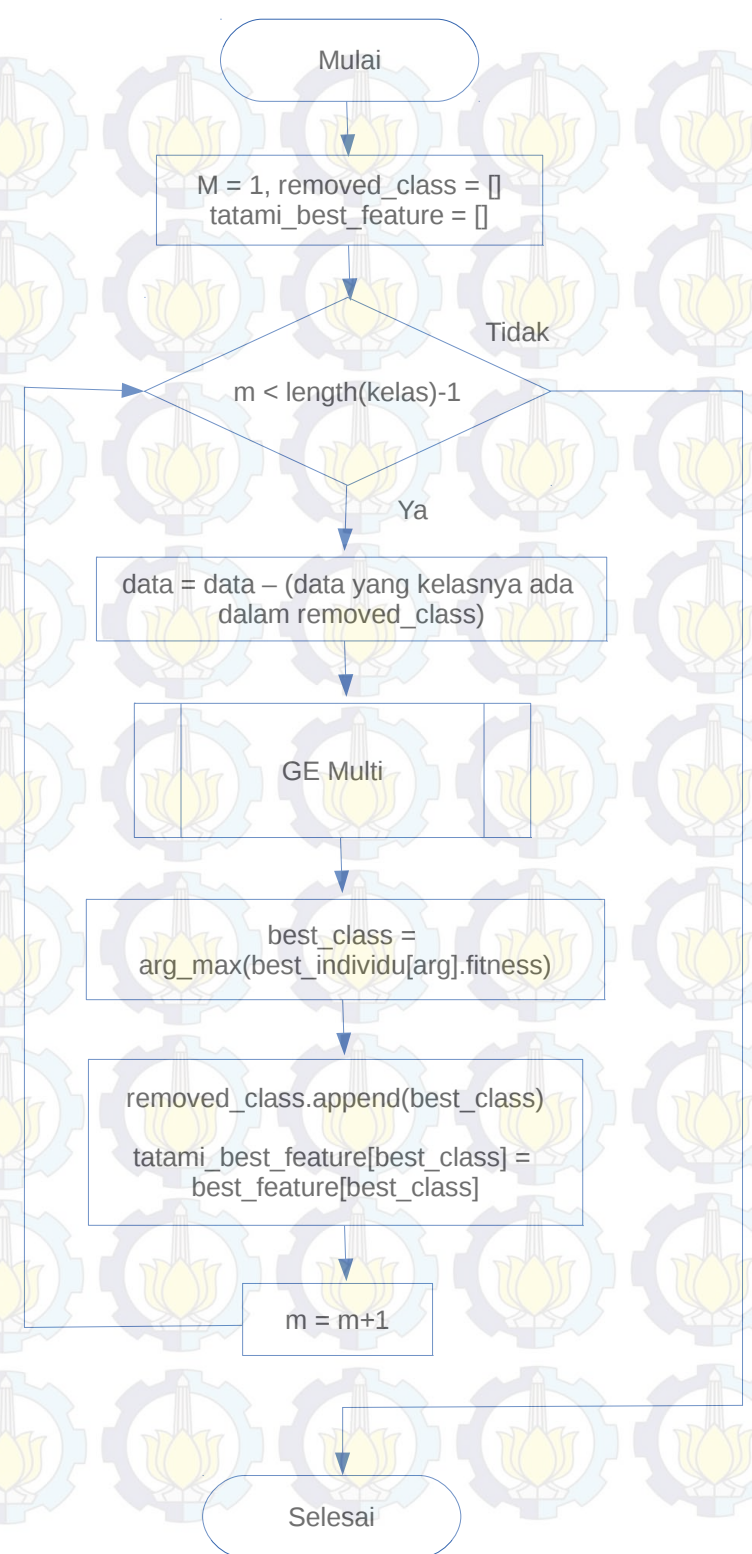

# GE Tatami

- Grammatical Evolution
- Menghasilkan **n-1 fitur baru**,  $n$  = jumlah kelas
- Fitness Value = Akurasi Classifier menggunakan n-1 fitur baru

# Flowchart GE Tatami

# Contoh Fitur yang Dihasilkan GE Tatami

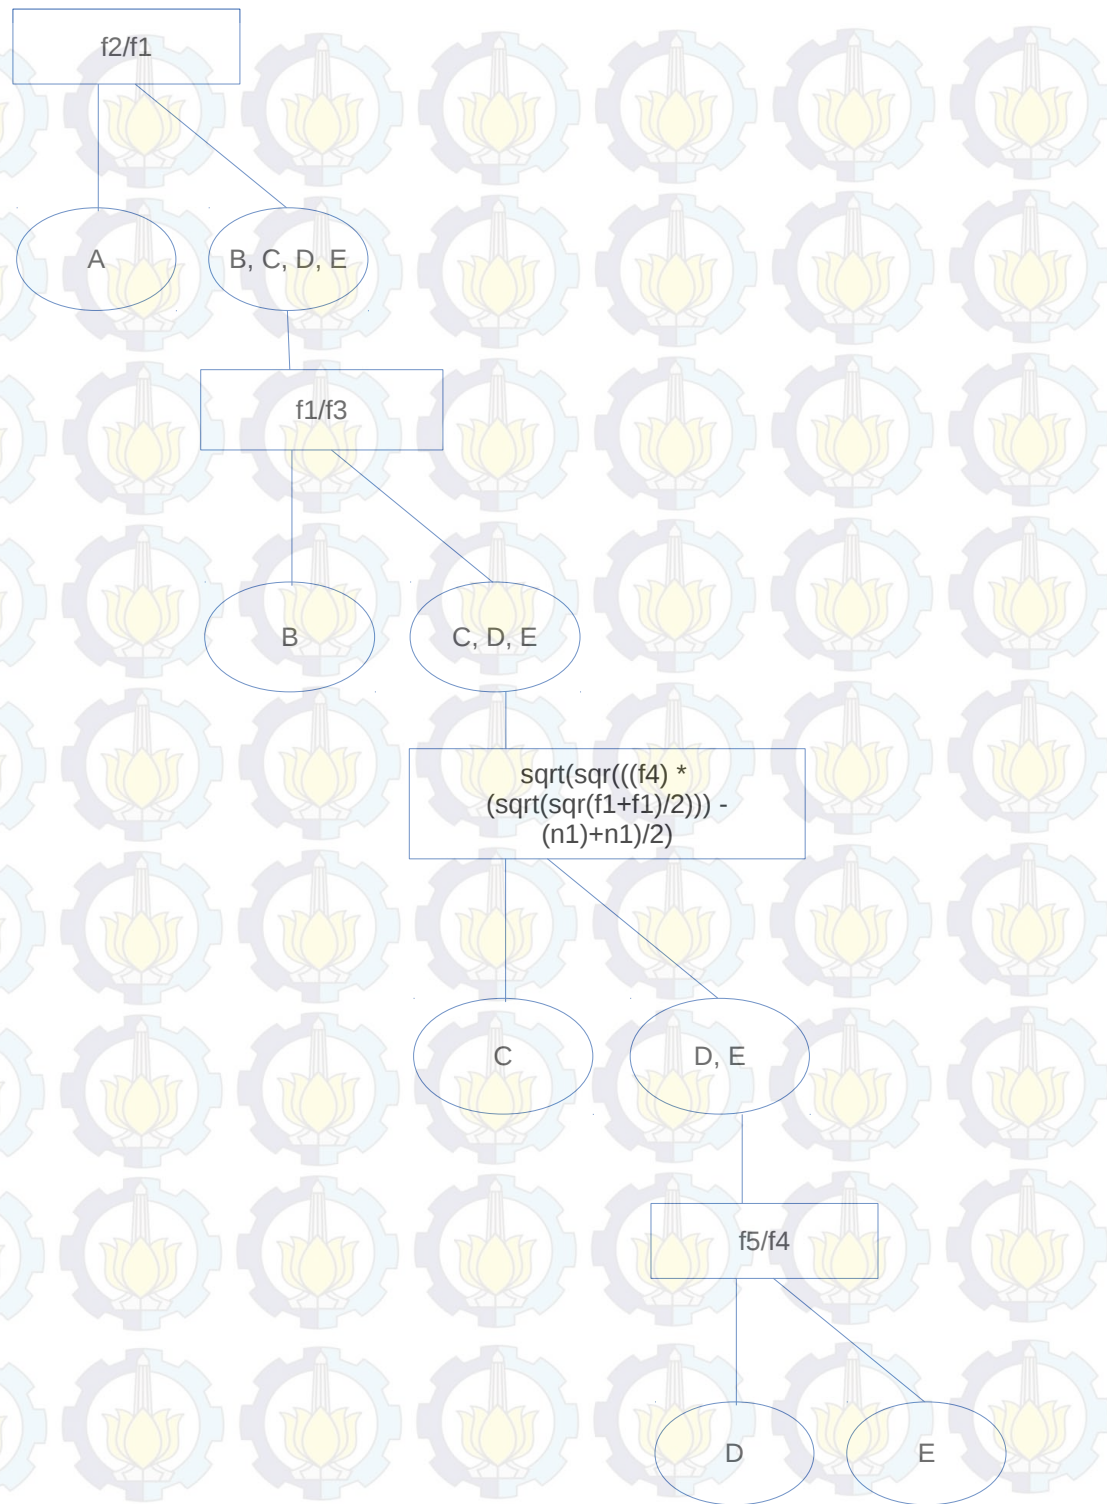

- **Fitur original** : sepal\_length, sepal\_width, petal\_length, petal\_width
- **Fitur yang dihasilkan (2)**: sepal\_length,  $(\text{petal\_length}) - (\sqrt{\text{sqr}(\text{sepal\_length} + \sqrt{\text{sqr}(\text{abs}(\text{petal\_length}) + (\sqrt{\text{sqr}(\text{petal\_length} + \text{petal\_width})/2})) - (\text{abs}(-((\text{sepal\_width}) - (\text{petal\_width}))))/2))/2}))$

Feature Projection

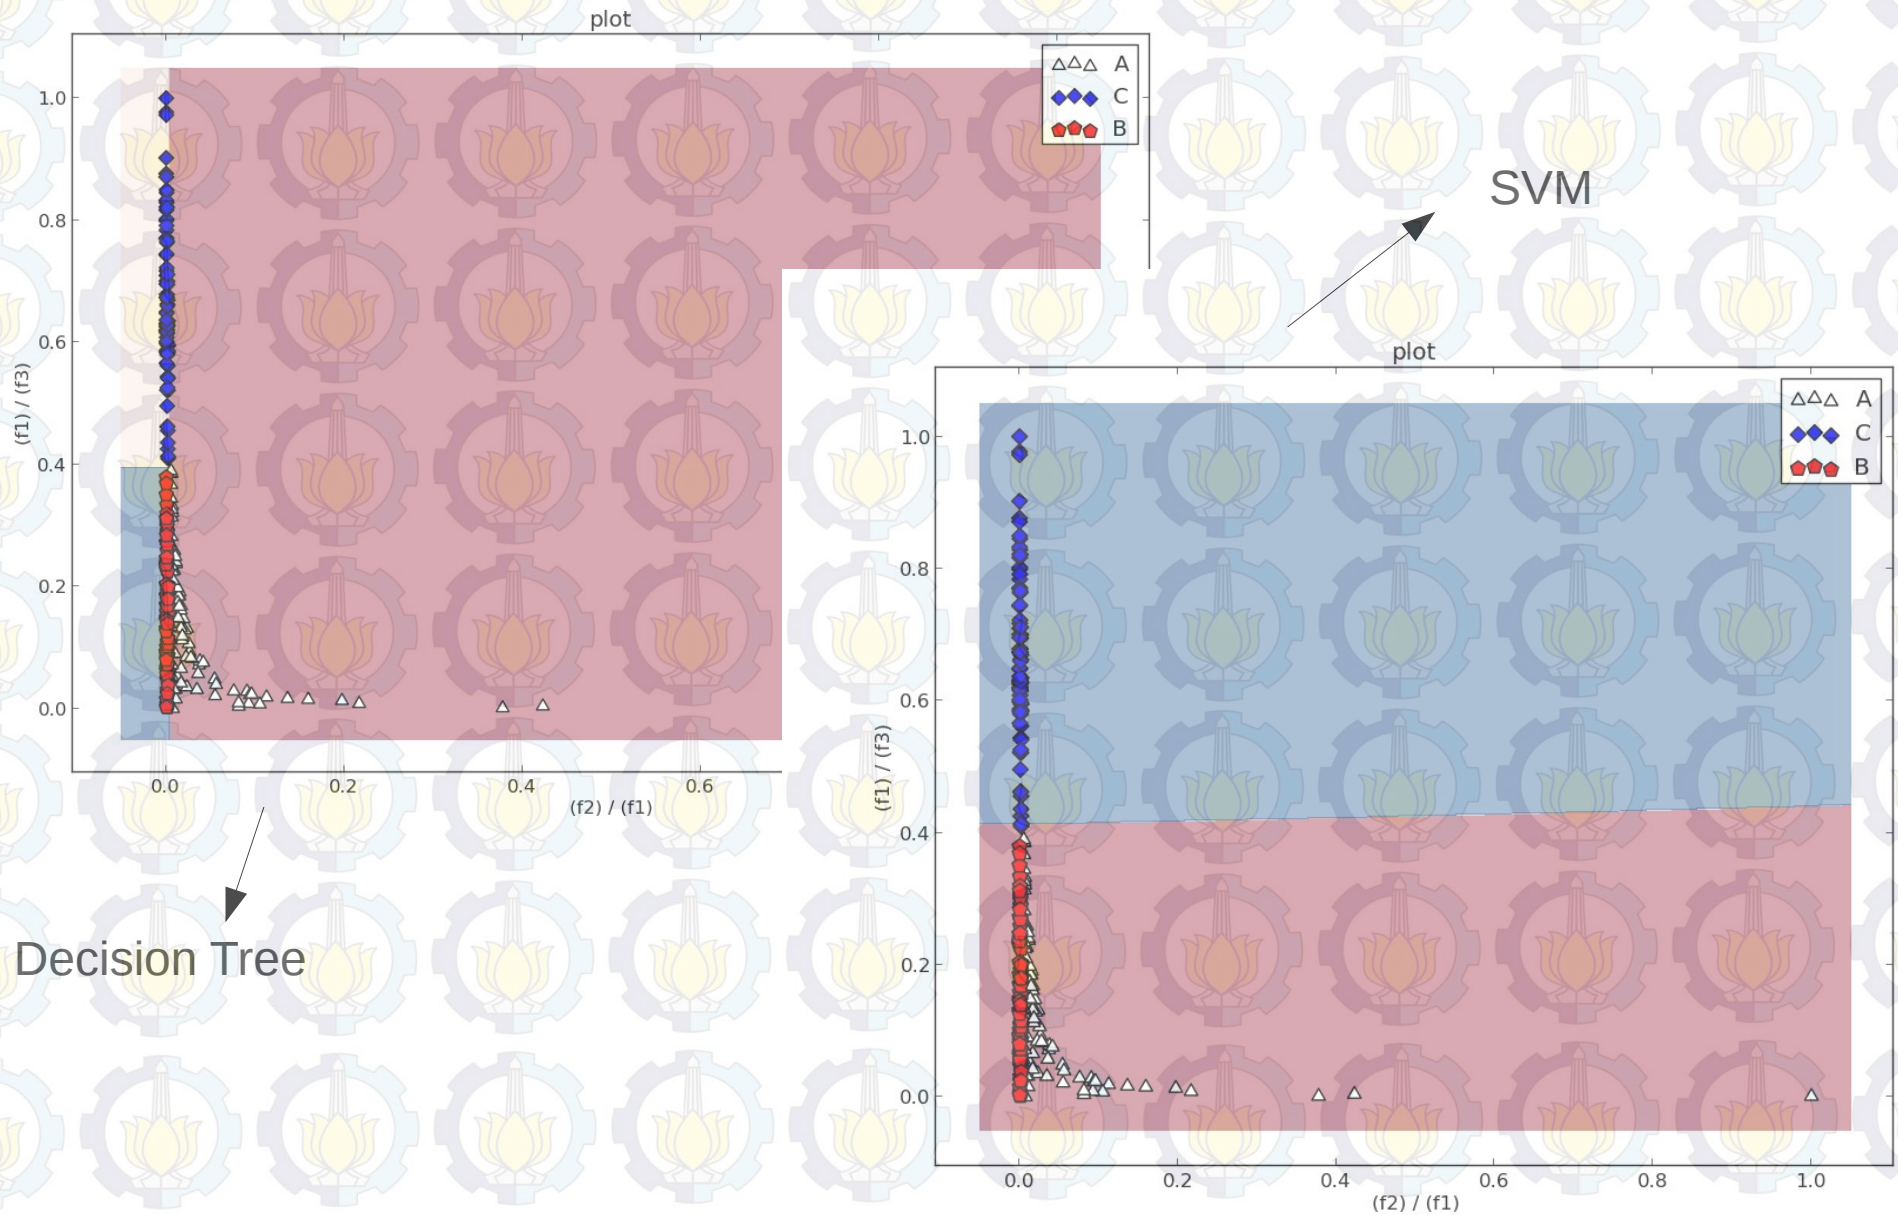

# GE Tatami & Decision Tree

# GE Tatami – Decision Tree vs SVM

# Kesimpulan

- Secara umum GE Tatami & GE Multi dapat menciptakan set fitur yang dapat meningkatkan akurasi decision tree.
- Penggunaan SVM sebagai classifier memberikan hasil yang buruk.
- GE Tatami memberikan persyaratan yang lebih mudah dipenuhi dibandingkan GE Multi & GE Global.
- Jika pada langkah pertama GE Tatami gagal mencari fitur terbaik, maka langkah selanjutnya tidak akan bisa memperbaiki akurasi.

# Saran

- Penggabungan GE Multi & GE Tatami diharapkan dapat memberikan hasil yang lebih baik.
- Optimalisasi fitness function dapat meningkatkan kecepatan komputasi
